NETWORKS DEFENDER

ABOUT COMPANY

TrendNET unifies a dynamic team of specialists on different IT fields.

We have experts with highest level of expertise:

MCSE - Microsoft Certified System Engineers,

MCP – Microsoft certified professionals,

MCSA – Microsoft certified system administrators, data base specialists,

Cisco certified specialists,

Open Code - Linux specialists, specialists in the electronic archiving field and many more.

All that implies, that **we are among companies with the most elevated knowledge base in Central and Eastern Europe.**

Like our knowledge, so are our solutions and products among most advanced in the field.

Activities of TrendNET Company

Production:

NetworksDefender line of network security appliances.

Computer Networks:

Complete planning, building, maintaining and supporting of complex cable or Wireless networks and connecting different types of networks.

System solutions:

implementing domain model of organization, central data storage, application servers, safe data storage systems, terminals system, Internet and mail systems, fault tolerant and NSPoF (No Single Point of Failure) systems and more.

Security solutions:

preparation of security policy documents and building of all mechanisms needed to implement it and building security systems for networks.

Connectivity solutions:

connecting remote networks through advanced architectures of Virtual Private Networks, as well as guaranteeing availability of information for all types of mobile clients.

Document systems:

complex solutions to problems of document flow in an organization.

Education:

as a base of successful implementation and usage of any functionality within your company we offer education on different levels for all IT fields that our company covers.

NETWORKS DEFENDER

INTRODUCTION

Today's life is connected to the Internet. Not like something advanced, not something just market leaders have, but something we all use as a common tool. As we share information from our databases or publish active information to others, we are open to the world.

There are good guys and also bad guys out there. As we are exposed to the world, we must be aware of potential dangers and we must protect ourselves against intrusions and viruses as well as control the content of WEB, MAIL and other traffic.

For sure we do not want confidential company data to be hijacked. Since we have a lot of experience in security solutions We developed 'a security in a box'. In fact, it is packed in a box, yet it offers most of techniques everybody needs to protect the network from non-wanted attacks and viruses.

Your data and your company are safe when Networks Defender guards your network.

Networks Defender provides affordable functionality by utilizing standard off the shelf hardware components as a platform for the most secure, efficient and supportable Operating System (Linux) available today.

Additionally, since the Networks Defender is built on this standard architecture, maintenance is a breeze.

Using the simple browser based interface, configuring one or all of the features included with your Networks Defender is easy. If you do have questions about configuration our experienced staff is ready to help. We realize this is a crucial component of your network.

Of course, every Networks Defender includes a money back guarantee and complete one-year warranty.

NETWORKS DEFENDER

THE BEST DEFENCE FOR YOUR NETWORK

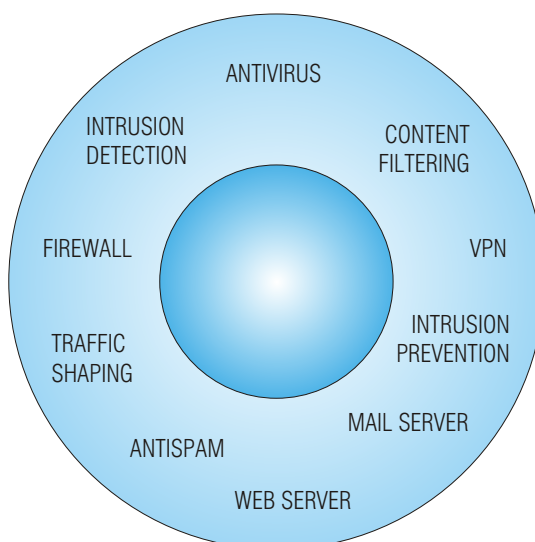

NetworksDefender is an **affordable network security appliance**, delivering **integrated firewall protection**, Virtual Private Networking (VPN), **Anti-Virus scanning** for up to 5,000 mailboxes, **content filtering**, and **unlimited anti-spam protection** to your business network.

Every NetworksDefender includes browser based configuration, reporting screens and commercial strength Reliable Anti-Virus scanning software.

Designed to support networks from five to 2000 PCs, **NetworksDefender offers the security, performance, and features of much more expensive appliances** at a fraction of the cost and with the flexibility you require.

MAIN FEATURES

- FireWall (Statefull, Application level)
- VPN (Network-to-network ; Client-to-network)
- Content Checking
- AntiVirus Protection
- Anti SPAM
- QOS - Traffic Shaping
- Network And Server Services

**MAXIMUM PERFORMANCE FOR ULTIMATE SECURITY
IN ONE APLIANCE.**

NETWORKS DEFENDER

SECURITY, CONNECTIVITY, QOS, ..

SECURITY

When we are talking about security, we are addressing range of factors that influence our internet experience (presence).

We realize that there is more to being secured than just the firewall.

The [Networks Defender](#) line of products [addresses the need for security by implementing a secure gateway for your network.](#)

The Networks Defender secured gateway not only takes care of intruders and attackers but also recognizes and [eliminates unwanted traffic and improper content.](#) As such Networks Defender handles the content - based threats from email and web traffic such as viruses, worms, intrusions, inappropriate web content in real time!

CONNECTIVITY

Providing availability of information and IT resources today requires coping with mobile users; branch offices and remote sites.

The Networks Defender way of doing this is by fully supporting the needs of virtual private networks.

Networks defender handles the load of hundreds of VPN tunnels in a secure and user friendly way.

Powerful architecture guarantees encryption and transfer of data through the tunnels at way high speeds.

Since Networks Defender naturally supports various DSL and Ethernet connections no additional ITW is needed. As a response to the high availability needs an ISDN backup option is available.

QOS / TRAFFIC SHAPING

Since all our Internet oriented communication, including VPN traffic is generally transported over a single internet pipe, it is naturally expected that we are capable of shaping the load we are producing.

Mechanisms utilized by Networks Defender for traffic shaping provide the administrators with a [versatile tool capable of addressing diverse scenarios that arise from network usage.](#)

Capable of defining sources, destinations but also type of traffic and many more attributes of the load, administrators can [fully enforce and monitor the usage of available bandwidth.](#)

Benefits of such actions are clear improvement of response times of critical applications.

In the same time the mechanisms can be used for limiting or preventing other unwanted traffic types.

NETWORK AND SERVER SERVICES

NETWORK SERVICES

In an SMB / SOHO scenario Networks Defender supported network services provide an easy setup of network environment.

Ranging from DHCP to DNS it is easy to release the network configuration worries to the Networks Defender box .

SERVER SERVICES

With its server architecture and own disk and processor capabilities Networks Defender can take on a vital role in many branch office scenarios .

Ranging from IPX file server support to AV distribution points for clients, Networks defender can replace old Novell servers and take on their traditional role as well as eating communication need of an office.

VALUE ADDED DISTRIBUTOR & RESELLER PROGRAM

If you have an established security or networking distribution/reseller business and are interested in a profitable new opportunity, we are offering you the possibility to enter our Authorized Distributor/Reseller level.

NetworksDefender Authorized Distributors/Resellers are expected to meet strict training and education requirements, by maintaining at least one NetworksDefender Certified Security Associate on their staff.

NetworksDefender Authorized Distributors/Resellers enjoy all of the opportunities and privileges associated with a direct relationship with Networks Defender.

NetworksDefender Authorized distribution/Reseller level provides:

- NetworksDefender Sales course which entitles you with certificate of NetworksDefender Certificated Sales Professional.
- NetworksDefender Technical course which entitles you with certificate of NetworksDefender Certificated Technical Professional.
- Certificates your Company with NetworksDefender Partner Certificate.
- Ability to distribute/resell NetworksDefender entire product line.
- Sales and technical support from resident team of NetworksDefender sales and technical specialists.
- Access to Market Development advantages.
- Access to leads to interested end buyers.
- Access to Sales and Marketing Information.
- Access to NetworksDefender Secured Partner Site.
- Monthly Email communication on the latest information from Networks Defender. Product information to help you sell NetworksDefender products and services.

Welcome to our NetworksDefender Value Added Distributor/Reseller program!

DEMO PROGRAM

NetworksDefender Demo program enables great benefits for our partners!

We are sure that the only way to successfully build the NetworksDefender business is to **know the product** to the point of excellence, **fully trust in its performances** and recognize **great market possibilities** that it offers.

In order for our partners to achieve those premises and build a **successful** sales and technical **team** which can be presented to the end customer as **professional** and **trustworthy** we prepared a NetworksDefender Demo program:

- Our partners can purchase one model of NetworksDefender security appliance at significantly lower price than normal partner buying price.
- That kind of support offers to the partner the possibility to put NetworksDefender in function at it's own network and use it for:
Learning, Testing, Case-Studying and Presentation purposes.
- For the period of testing, partners have full and free of charge sales and technical support from our team of NetworksDefender sales and technical specialists.

If however the product doesn't deliver what it promises, partners have the right to return the product in 30 days and get full refund.
